Audit – School Committee Position Advancement

List of all members of any committee with school/university/college in the name. Displays the position and if you are using this to store the grade, there is a suggested next year's value for the position. Optionally displays the SQL code to provide to Gabriel to perform updates. (bmaly 2021.03.23)

Parameters:

- Church
  - Select from your available parishes
- Display SQL code
  - Yes/No

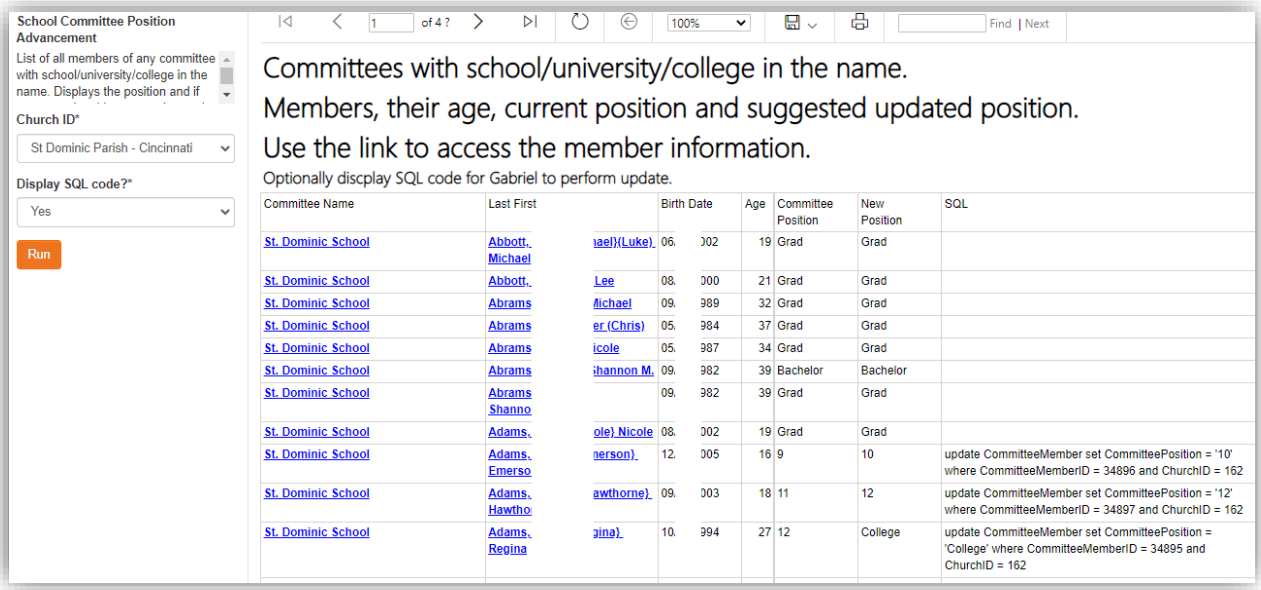

Purpose: Once again utilizing the Committee feature in Gabriel, Students can be added to committees named for the schools, or all children in one 'School Grades' committee. The grade level can be stored in the 'position' field of the membership.

Each year the students 'grade' advances. This report can help you with the update process.

This report will query your member data for any committee that has 'school', 'university' or 'College' in the name, and list all the members, their birthdate, age, the current position and a 'guess' as to what the next position should be. . Hyperlinks (right click and open in new tab) to the member record can be used for going directly to the student record where you can manually update the data.

Optionally, you can select the 'yes' to add the 'SQL code' to the query results. This SQL code can be provided to the Gabriel Support desk where they will update the member committee positions for us. If you have MANY updates, the suggested procedure would be to download the list to excel, where you may want to selectively remove some of the suggested updates by deleting the row. Once you complete the list, send this to the support email and the IT team will take it from there.
